Appl. No. 10/661,052  
Amdt. dated September 27, 2006  
Reply to Office Action of March 27, 2006

PATENT**REMARKS/ARGUMENTS**

This Amendment is in response to the Office Action mailed March 27, 2006. Claims 1-83 were pending in the present application. This Amendment amends claims 1, 12, 22, 31, 42, 52, 61, 69, and 78, without adding or canceling any claims, leaving pending in the application claims 1-83. Reconsideration of the rejected claims is respectfully requested.

**I. Extension of Time**

A copy of the Office Action as originally mailed was not received by Applicants or their representatives. During a due diligence investigation, it was discovered on September 1, 2006, that an Office Action had been mailed. During subsequent conversations with the Examiner, the Examiner indicated that re-mailing was not necessary as the Office Action can be obtained from PAIR, and that a Petition is necessary to restart the period for response and avoid the need for payment for a three month Extension of Time. Accordingly, a Petition accompanies this response, and it is believed that no Extension of Time is necessary to accompany this response. If the payment for such an Extension is deemed at any time to be necessary to keep the present application from becoming abandoned, then the Office is authorized to charge the deposit account as indicated in the accompanying documentation.

**II. Amendment of the Specification**

The specification is amended to update the status of the listed related applications. These amendments do not add new matter and are not intended to alter the scope of any claimed invention. Applicants respectfully request that the amendments to the specification be entered.

**III. Rejection under 35 U.S.C. §102**

Claims 1-5, 7-16, 18-21, 31-72, and 74-83 are rejected under 35 U.S.C. §102(e) as being anticipated by *Lin* (US Pat. App. No. 2004/0205477). Applicants respectfully submit that *Lin* does not disclose each element of these claims.

Appl. No. 10/661,052  
Amdt. dated September 27, 2006  
Reply to Office Action of March 27, 2006

PATENT

For example, Applicants' claim 1 as amended recites a method for performing an action, including:

accessing recorded information, the recorded information including information recorded during a presentation of source information;  
determining a source document using the recorded information, the source document being separate from the recorded information and including information corresponding to at least a portion of the source information;  
determining if a criterion is satisfied based on the recorded information and the source document, the criterion being satisfied if a portion of the source document corresponds to a portion of the recorded information;  
determining an action to be performed if the criterion is satisfied; and  
performing the action if it is determined that the criterion is satisfied

(emphasis added). Such limitations are not disclosed by *Lin*.

*Lin* discloses the creation of a browsable multimedia data object including a plurality of data streams corresponding to a presentation of information, in order to create a single, coherent recording of the real-time presentation that includes the slides, the presenter's interaction with the slides, and the audio of the presentation, which are simultaneously recorded during a presentation, for subsequent viewing by a user (paragraphs [0001], [0006], [0007], [0033]). The single multimedia data object includes the "plurality of synchronized overlaid replayable bitstreams" representing the real-time slide presentation (paragraph [0027]). The bitstreams within the object are synchronized so that when a slide is displayed, for example, the corresponding interaction is displayed and the corresponding audio is played (paragraphs [0029] [0031]). This is very different from what is recited in Applicants' claim 1.

Applicants' claim 1 compares recorded information (recorded during a presentation) to a separate source document that contains information corresponding to the source information that was presented during the presentation. If a portion of the separate source document corresponds with a portion of the recorded information, such as the source document including an image corresponding to a slide shown during the presentation and included in the separate recorded information, then a criteria is met and an action taken. As discussed in the specification, this action can include, for example, the displaying of the image on a mobile device (allowing a user to have a better view of the image) or the displaying of information to a user that includes language translation, so that the user can view the image in a language that is more familiar to the user. *Lin* does not disclose such functionality. *Lin* records information during a presentation

PATENT

and stores that information in a single object as linked bitstreams. *Lin* does not disclose comparing the recorded information to a separate source document and taking an action if a portion of the recorded information matches a portion of the information in the source document. The Office Action asserts that the limitation of satisfying a criterion is met by synchronization of the overlaid bitstreams, but it is respectfully submitted that synchronizing concurrently recorded streams in a single object does not meet the limitation of comparing recorded information to source information in a separate source document and determining if any portions of these two separate files match between the recorded presentation information and the separate source information. Further, *Lin* does not disclose taking an action in response to the recorded information matching information in a separate source document. For example, *Lin* does not disclose comparing the bitstreams in the object to a separate slide document and then taking an action in response thereto. The disclosure of *Lin* cited in the Office Action on page 3 of replaying the single data object does not meet this limitation as it simply involves replaying the single data object without first comparing that data object to a separate source document for comparison. As such, it is respectfully submitted that *Lin* cannot anticipate Applicants' claim 1 as amended, or the claims that depend therefrom. The other pending claims recite limitations that similarly are not disclosed by *Lin*, such that these claims also cannot be anticipated. Applicants therefore respectfully request that the rejection with respect to claims 1-5, 7-16, 18-21, 31-72, and 74-83 be withdrawn.

**IV. Rejection under 35 U.S.C. §103**

Claims 6, 17, 22-29, 36, and 73 are rejected under 35 U.S.C. §103(a) as being obvious over *Lin* in view of *Boeglund* (US 2003/0101043). Applicants respectfully submit that these references do not teach or suggest each element of these claims.

For example, Applicants' claim 22 as amended recites a method for determining translated slides of source document slides in a source document, including:

- accessing recorded information, the recorded information including information recorded during a presentation of source information from at least one source document;
- determining a source document slide in the at least one source document that corresponds to a portion of the recorded information;
- determining a translated slide of the source document slide; and

Reply to Office Action of March 27, 2006

PATENT

communicating the translated slide to a device, whereby the device is operable to display the translated slide while accessing the portion of the accessed recorded information

(emphasis added). Such limitations are neither taught nor suggested by *Lin* and/or *Boeglund*.

As discussed above, *Lin* does not teach or suggest comparing a separate source document to recorded information to determine whether there are corresponding portions. Further, as recognized in the Office Action on page 6, *Lin* does not disclose translating information in presentation slides. *Boeglund* does not make up for these deficiencies in *Lin* with respect to claim 22. *Boeglund* teaches a process for translating slides into another language, such as by saving text in the slide to an auxiliary file, such as a word processing file, and using a standard program to do the translation (paragraphs [0015]-[0022], [0041]-[0043]). *Boeglund* does not, however, teach or suggest comparing a separate source document to recorded information to determine whether there are corresponding portions, and then displaying a translated slide on a device in response thereto. As such, Applicants' claim 22 and the claims that depend therefrom cannot be rendered obvious by *Lin* and *Boeglund*, either alone or in combination. The other rejected claims recite limitations that similarly are neither taught nor suggested by these references, for reasons including those discussed above, such that these claims also cannot be rendered obvious by these references. Applicants therefore respectfully request that the rejections with respect to claims 6, 17, 22-29, 36, and 73 be withdrawn.

Claim 30 is rejected under 35 U.S.C. §103(a) as being obvious over *Lin* in view of *Boeglund* and further in view of *Smith* (US 2004/0205601). Applicants respectfully submit that these references do not teach or suggest each element of these claims. Claim 30 depends from claim 22, which is not rendered obvious by *Lin* and *Boeglund* as discussed above. *Smith* does not make up for the deficiencies in these references with respect to claims 22 or 30.

*Smith* teaches analyzing data files for hidden or embedded data and classifying/removing/resolving the hidden data in order to avoid security concerns with sharing the document, for example ([0063]-[0065]), and is cited as teaching identifying, classifying, extracting, and resolving hidden data in slides (OA p. 10). *Smith* does not, however, teach or suggest comparing a separate source document to recorded information to determine whether

there are corresponding portions, and then displaying a translated slide on a device in response thereto. Further, *Smith* does not teach or suggest determining a slide number from recorded information to determine a corresponding source document slide in a separate source document. As such, *Smith* cannot render obvious Applicants' claims 22 or 30, either alone or in any combination with *Lin* and *Boeglund*. Applicants therefore respectfully request that the rejection with respect to claim 30 be withdrawn.

#### V. Amendment to the Claims

Unless otherwise specified, amendments to the claims are made for purposes of clarity, and are not intended to alter the scope of the claims or limit any equivalents thereof. The amendments are supported by the specification and do not add new matter.

#### CONCLUSION

In view of the foregoing, Applicants believe all claims now pending in this Application are in condition for allowance. The issuance of a formal Notice of Allowance at an early date is respectfully requested.

If the Examiner believes a telephone conference would expedite prosecution of this application, please telephone the undersigned at 415-576-0200.

Respectfully submitted,

Jason D. Lohr
